

# Les Éco'llégiens

We are pupils at Montguyon middle school, this is our **final model for our green school**. We are going to present it to you more precisely...

## Step 1

more trees at school

## Step 2

putting a greenhouse in our middle school to fight increasing prices

## Step 3

Aquaponics. Aquaponics is the farming of fish producing their own fertilizer for plants.

## Step 4

a GREEN WALL for the SOUTH FACADE OF the SCHOOL. A green wall allows a better insulation for a building and the reduction of the temperature outside and inside.

## Step 5

replacing existing badly-insulated walls by triple glazed windows
